RESEARCH FOCUS

Trustworthy and efficient machine learning for document intelligence and multimodal systems, with an emphasis on calibrated uncertainty, evidence-grounded decisions, human-AI collaboration, and deployable ML systems. I seek to pursue graduate research at MIT EECS at the intersection of machine learning, intelligent systems, and human-centered computing.

EDUCATION

Hanul Institute of Technology - B.S. in Computer Engineering

Seoul, Republic of Korea | Mar 2021 - Feb 2027 (expected) | GPA: 3.92/4.00 | Major GPA: 3.96/4.00

Selected coursework: Machine Learning, Natural Language Processing, Computer Vision, Algorithms, Operating Systems, Distributed Systems, Probability and Statistics.

RESEARCH EXPERIENCE

Undergraduate Researcher, Intelligent Systems Laboratory | Sep 2024 - Present

- Developed a layout-aware document understanding pipeline integrating OCR tokens, visual features, and a lightweight transformer; improved field-extraction F1 from 0.84 to 0.91 on a 12,000-page internal benchmark.
- Designed calibrated uncertainty estimates and evidence highlighting to route ambiguous eligibility decisions to human reviewers.
- Co-authored a workshop paper and released a reproducible evaluation toolkit for extraction accuracy, calibration, and failure analysis.

Research Intern, Mirae AI Research | Jun 2025 - Aug 2025

- Built retrieval and reranking components for Korean-English technical document search, reducing unsupported answers by 19% in offline evaluation.
- Designed ablation studies and an error taxonomy to isolate retrieval, grounding, and generation failures using Python, PyTorch, and PostgreSQL.

SELECTED PROJECTS

ApplyWise - Evidence-Grounded Application Assistant | 2026

- Led a four-person team developing a macOS document agent that parses application guidelines, structures eligibility rules, matches applicant evidence, and identifies missing or ambiguous requirements.
- Designed a three-way decision workflow - eligible, blocked, or human review - with source-level evidence and submission-readiness tracking.

EdgeVision - Efficient Visual Inspection | 2025

- Compressed and optimized a defect-detection model for Apple Silicon, achieving 2.4x faster inference with less than 1% accuracy loss.

PUBLICATIONS AND PRESENTATIONS

Kim, M., Park, S., and Lee, J. "Calibrated Evidence Extraction for Long-Form Application Documents." Workshop on Practical Document Intelligence, 2026. (Fictional sample citation)

Kim, M. "Human Review Interfaces for Uncertain Document Decisions." Hanul Undergraduate Research Symposium, 2026.

LEADERSHIP AND SERVICE

President, Hanul AI Student Society | 2025 - 2026

- Organized weekly research-paper discussions and a 120-participant student hackathon; secured sponsorship and mentored six project teams.

Teaching Assistant, Data Structures | Spring 2025

- Led laboratory sessions for 42 students and created visual debugging exercises for trees, graphs, and dynamic programming.

HONORS

- Dean's High Honors, six semesters (2021-2026)
- Hanul Presidential Scholarship for Academic Excellence (2024-2026)
- Best Student Project, Hanul Engineering Expo (2026)

TECHNICAL SKILLS

Languages Python, C++, Swift, JavaScript, SQL

ML / Data PyTorch, Transformers, OpenCV, scikit-learn, pandas; evaluation, calibration, retrieval, multimodal learning

Systems macOS, Linux, Git, Docker, PostgreSQL, REST APIs

Human Languages Korean (native), English (advanced)

GRADUATE RESEARCH DIRECTION

At MIT EECS, I aim to study how multimodal learning systems can make high-stakes document workflows more reliable, efficient, and accountable. My intended direction connects robust representation learning and systems optimization with calibrated uncertainty, evidence attribution, and interfaces that support meaningful human oversight.
